ABOUT CYCLISTIC

- **Cyclistic** is a Chicago-based bike-sharing company that provides customers with convenient access to bicycles through a network of stations across the city. The company offers single-ride passes, day passes, and annual memberships, with a business goal of increasing annual memberships by converting casual riders into long-term subscribers.

TYPES OF RIDERS

- **Casual Riders:** Customers who purchase single-ride or day passes
- **Cyclistic Members:** Customers who purchase annual memberships

BUSINESS PROBLEM

- Annual members are more profitable than casual riders.
- Cyclistic wants to increase annual memberships.

KEY QUESTIONS

- How do casual riders and annual members use Cyclistic bikes differently?
- How can those insights help convert casual riders into members?

DATA OVERVIEW

DATA SOURCE

- Publicly available historical trip data from Divvy Bikes (Chicago Bike Share System).
- Dataset provided by Motivate International Inc.

DATASET DETAILS

- Three months of ride data analyzed (January - March 2025) - First Quarter.
- Includes bike trips made by annual members and casual riders.
- Dataset contains 576,583 rides from January - March 2025.
- Key Variables:
 - Member Type (member_casual), Bike Type (rideable_type), Ride Duration (ride_duration_in_mins), Day of Week (day_of_week), Ride Count (ride_id).

DATA CREDIBILITY

- Reliable: Official Divvy bike-share data.
- Original: First-party source.
- Current: Q1 2025 data
- Privacy Protected: No personally identifiable information.

DATA CLEANING PROCESS

Google Sheets

- Reviewed column names and data types.
- Checked for missing values.
- Checked for duplicate ride IDs.
- Created a ride duration field (ride_duration_in_mins).
- Created a day_of_week field from the trip start date.
- Checked for negative ride durations.
- Verified ride duration calculations.

BigQuery (SQL)

- Uploaded January, February, and March 2025 datasets.
- Combined monthly datasets using UNION ALL.
- Identified rides shorter than one minute.
- Removed rides shorter than one minute using SQL.
- Verified that member_casual contained no missing values.
- Prepared a cleaned Q1 dataset for analysis.

Quality Checks

- Verified duplicate ride IDs.
- Verified ride duration values.
- Confirmed rider type classifications.
- Confirmed no rides shorter than one minute remained in the final dataset.

RIDER DISTRIBUTION

Key Finding

- Members generated **442,982 rides**
- Casual riders generated **133,601 rides**
- Members accounted for approximately **77% of total rides**

Insight

- Annual members are the dominant user group and ride significantly more frequently than casual riders.

AVERAGE RIDE DURATION

Key Finding

- Casual riders averaged **19.04 minutes per ride**
- Members averaged **10.80 minutes per ride**

Insight

- Casual riders take trips that are approximately **76% longer** than member trips.
- This suggests casual riders are more likely using bikes for leisure and recreation rather than commuting.

DAY OF WEEK USAGE

Key Findings

- Member rides remain consistently high throughout weekdays.
- Casual ridership increases significantly on Friday and Saturday.
- Casual riders show their highest activity on weekends.

Insight

- Members appear to use bikes primarily for commuting, while casual riders appear to use bikes more for recreational purposes.

BIKE TYPE PREFERENCE

Key Findings

- Electric bikes are the most popular bike type among both rider groups.
- Members completed approximately 275,080 electric bike rides.
- Casual riders completed approximately 88,117 electric bike rides.

Insight

- Electric bikes appeal strongly to both rider groups.
- Promotions tied to e-bike usage may encourage casual riders to convert to memberships.

KEY FINDINGS SUMMARY

Finding 1

- Members account for approximately **77% of all rides**.

Finding 2

- Casual riders take significantly longer trips (**19.04 min vs 10.80 min**).

Finding 3

- Casual riders are most active on weekends, particularly Fridays and Saturdays.

Finding 4

- Both casual riders and members prefer to use electric bikes.

RECOMMENDATIONS

Recommendation 1

- Converting even a small percentage of casual riders into members could generate a meaningful increase in recurring revenue.

Recommendation 2

- Promote memberships as a cost-effective option for frequent recreational riders.

Recommendation 3

- Target casual riders with weekend-focused membership promotions, such as discounted annual memberships, free trial memberships, or bonus ride credits offered on Fridays and Saturdays.

Recommendation 4

- Offer incentives tied to electric bikes.

CONCLUSION

Analysis of Cyclistic's Q1 2025 ride data revealed clear differences between annual members and casual riders. Members accounted for approximately 77% of all rides and used the service more consistently throughout the week, suggesting regular commuting behavior. In contrast, casual riders took significantly longer trips and were most active on weekends, particularly Fridays and Saturdays, indicating recreational use. Both rider groups showed a preference for electric bikes. These insights suggest that Cyclistic can increase annual memberships by targeting casual riders with weekend-focused promotions, highlighting the value of membership for frequent recreational riders, and offering incentives linked to electric bike usage.
